

## # 📄 Universal Text Selector Tool

**Universal Text Selector Tool** is a lightweight, inbuilt utility that lets you **select and copy text from anywhere on your screen**—including videos, images, and system windows—without needing to open external tools like Google Lens. Just one shortcut away!

---

## ## 🚀 Features

- ☒ **Select and copy text** from:
  - Videos
  - Images
  - System windows
  - Any on-screen content
- 💧 **Inbuilt system integration** - No need to launch external apps
- ⚡ **Runs in the background** on startup
- 💡 **Simple hotkey activation**: `Ctrl + Caps Lock`
- 🗺️ Uses OCR (Optical Character Recognition) in the background
- 📦 Portable `.exe` file - No installation required

---

## ## 🛠️ How to Use

1. **Download the `.exe` file** from the [Releases](#) section of this repository.
2. **Move the `.exe` file to your Startup folder**:
  - Press `Win + R`, type `shell:startup`, and hit Enter.
  - Copy-paste the `.exe` file into this folder.
  - This ensures the tool runs automatically every time your system starts.
3. **That's it!** The tool now runs silently in the background.
4. **To activate text selection**, simply press:
